dynapipe[®]
SYSTEMS

Company Introduction

Dynapipe Piping Systems is a manufacturer and supplier specialising in complete polyethylene (HD-PE) pipe systems and solutions for fluid / gas transfer and cable protection.

Working directly with owners, engineers and contractors, Dynapipe helps to create pipeline assets which are both durable and cost-effective.

Dynapipe supplies complete, application specific pipe system packages including valves, fusion welding equipment, training and technical support.

Dynapipe began operating in 2000 from 3 sea containers. Being driven by a passionate and innovative leadership team, over 120 staff are now employed at the state of the art 40,000m² facility in the mining hub of Perth Western Australia.

*"We're committed to helping
Miners create value"*

Put Your Trust in Quality & Expertise

*In every industry and with every service,
we can be relied upon to deliver the right
solution at the best value.*

What makes us different?

- We *listen* and work closely with our clients to understand their challenges.
- We help *define* the solution that is right for them using our materials, technology, training and installation methodology.
- We *solve* problems drawing on our breadth of knowledge and experience, and our supply capabilities.
- We can, finally, *deliver* pipeline solutions that are right for the industries we serve.

What Our Clients Say

"Dynamipe saved us over 8 weeks on a project, thats why we use them for our pipe supply"

- Project Manager

Africa Gold Mine

"I would like to thank you and Dynamipe for the wonderful service you have provided. Personally I will always use Dynamipe as the first "port of call" for any future poly requirements"

- Site Supervisor:

Koolyanobbing Project.

"The conduct was outstanding. Dynamipe's flexibility in meeting our needs and the integrity of products and services is worthy of special mention."

- Site Engineer.

Esperance Port Access Corridor

12 reasons

Why companies choose Dynapipe Piping Systems as their HDPE pipeline supply partner

TRUST

- Experience - most highly trained and experienced team in the industry with over 100 years of combined experience.
- Responsiveness – the company owner is the CEO and directly involved, so decisions are made quickly in response to your requests. We don't run away if there is a problem.
- Track record - Proven over thousands of projects, with references available.

CONFIDENCE

- Teamwork – we work with our customers to understand their business, meet their requirements and deliver upon their priorities and objectives.
- Reliability – Dynapipe will supply on-time, as specified, and with all documentation.
- Capacity – Dynapipe has what it takes to deliver on major projects.

QUALITY ASSURANCE

- Quality Management Systems certified to ISO 9001 and ISO/TS 29001.
- Piping products certified to AS/NZS 4130. Only 100% approved AS/NZS 4131 PE100 raw material used (no second hand/ contaminated material).
- As the manufacturer, we have complete control - raw material to delivery.

TECHNICAL EXPERTISE & SUPPORT

- Technical support service for designers / engineers and installers.
- Fusion Weld Training through our own Registered Training Organisation.
- Fully equipped NATA accredited laboratory for destructive joint and material testing. Onsite QA also available.

IMPORTANT NOTICE:

Notes on the use of this catalogue:

The "Family" code shown at the top of every page refers to the fitting TYPE.

E.g.: 2014 is the code for an electrofusion coupler. The next four numbers refer to the SIZE; e.g., 0110 is the code for a 110 mm fitting, 1163 for a 110 mm x 63 mm reducer; therefore the code for a 110 mm electrofusion coupler is 2014.0110 and a 110 mm x 63 mm reducer would be 2034.1163.

As always with Dynapipe technical information, we supply it as a guide in the interest of better understanding of technical properties of our products. It represents the best information available to us at the time of publication. However, the application of such information may involve engineering judgements which cannot be correctly made without intimate knowledge of all the conditions pertaining to a specific installation. Dynapipe does not act as a consultant in this regard; the responsibility for the use of any information or advice contained herein rests solely with the user. No warranty, expressed or implied, (other than Statutory Warranty) is given as to the information or results obtained by the use thereof, and Dynapipe will not be held liable for any costs, direct or indirect, that may arise therefrom. All pressure ratings given are subject to applicable regulations and standards. For further information please contact our Technical team or check with your local regulatory authority.

Indemnity: Company policy is one of continual improvement, therefore changes in product dimensions, specifications and performance data may be made without prior notice and without incurring liability. All dimensions shown in this catalogue are intended as a guide only. If exact measurements are required, please contact our sales team.

Please contact our sales team if there is any items required which are not shown in this catalogue. We are also able to source & supply a wide range of associated products such as valves and non-standard flanges.

Dynapipe

PE PRESSURE PIPE

Dynapipe's high quality HDPE Pressure Pipe is manufactured from AS/NZS 4131 PE100 raw material and WaterMark Certified to AS/NZS 4130.

Available from 20 mm up to 800 mm in diameter, Dynapipe PE100 pipe is available in coils and straight lengths with the option of striping or full coating for system specific colour coding. We hold a complete stock of common sizes and SDR ratings. Call us now on +61 8 6223 0444 to discuss your requirements.

BUTT WELD AND FABRICATED FITTINGS

Our extensive range of fabricated fittings includes sweep bends, junctions, true Y pieces, equal and reducing tees, and segmented bends ranging in size from 25 mm - 800 mm. For more detailed information on fabricated items such as spools, manifolds, tanks and flanged pipe turn to page 88. Call us now for more information on +61 8 6223 0444.

90° Sweep Bend_____	20	Fabricated Reducing Tee_____	28-29
60° Sweep Bend_____	21	Fabricated Equal Tee_____	30
45° Sweep Bend_____	22	Fabricated True Y Junction_____	31
30° Sweep Bend_____	23	Fabricated 45° Junction_____	32
15° Sweep Bend_____	24	Short Spigot Eccentric Reducer_____	33
90° Segmented Bend_____	25	Short Spigot Concentric Reducer_____	34-35
45° Segmented Bend_____	26	Butt Weld End Cap_____	36
90° Short Radius Bend_____	27	Custom & Specialised Fittings_____	37

Dynapipe offers custom and specialized fittings including fully pressure rated tees, junctions and flanges machined from solid and hollow bar.

Fully rated short spigot equal and reducing tees from 355 mm to 710 mm.

Fully rated long spigot equal tees and reducing tees from 355 mm to 710 mm.

Fully rated level invert reducing tees from 355 mm to 710 mm.

Spigot 45° Tees (Y Junction)- Fully pressure rated from 250 mm to 630 mm.

FLANGES, GASKETS & BOLT SETS

Dynapipe offers the complete package of PE stub flanges, galvanised or stainless steel backing rings, and packaged bolt sets. We also offer flange gaskets in a range of materials including fibre, rubber and the revolutionary Steel-Core rubber profile. Backing rings in AS4087, DIN, Table F and H patterns are available to order. Please call our sales team on +61 8 6223 0444 for further information.

EPC Rubber Flange Gasket

FLANGE RING GASKETS - KC6327 2 mm FIBRE

KC6327 is a gasket material based on SBR-bound aramid fibres and inorganic fibres. Its key feature is a relative softness and high compressibility which enables sealing under lower bolt loads than most other fibre gaskets.

Following the correct flange installation procedure and using the correct bolt torques is critical to long term flange joint integrity. Contact us for more information and a copy of our Flange Joint Installation Guidelines.

Looking for flange gaskets made to your specifications? Please contact us as we supply a wide variety of fibre and rubber gaskets to order.

STEEL-CORE RUBBER FLANGE GASKET

STEEL-CORE PROFILE™ RUBBER FLANGE GASKET

Tired of battling with leaking gaskets, flange misalignments and time consuming torquing and re-torquing procedures?

Get the job done quicker and eliminate leaks with the revolutionary Steel-Core™ Profile rubber gaskets!

These rubber gaskets are reinforced with the Steel-Core™ ring, which makes them rigid and prevents extrusion/ leaks under higher pressures which is a problem with plain rubber gaskets. They also have a special O-ring profile which increases sealing performance dramatically, effectively two sealing mechanisms in one gasket.

125	9584.0125		

KEY BENEFITS:

- Effective sealing under low bolt torque loads.
- Compensation of small surface imperfections.
- Flange face misalignment is more easily compensated than flat gaskets, especially fibre types.
- Seal maintained even with a small degree of flange movement.
- Higher durability of plastic flange joints due to lower torques helping to prevent distortion.
- Lower tensile grade fasteners required, providing cost savings.
- Steel-Core ring is vulcanised within the centre of the gasket, preventing corrosion.
- Will withstand pressures of up to 4,000 kPa (at 20°C) depending on flange.
- Made in Germany.

SPIGOT FITTINGS

Dynapipe offers an extensive range of high quality PE100 Spigot Fittings sourced from leading European manufacturers. We hold a large inventory to ensure your project is delivered on time. For more information call us now on +61 8 6223 0444

ELECTROFUSION FITTINGS

The Dynapipe Electrofusion System is easy to use and offers high performance with a rapid, convenient method of joining polyethylene pipes. Precise positioning of the energising coils of wire in each fitting ensures uniform melting for a strong joint and the minimisation of welding and cooling time. For more information call us now on +61 8 6223 0444

ADDITIONAL SERVICES

From a fully equipped fabrication workshop to a nation-wide Registered Training Organisation, we have many additional services to assist you in completing your project. Need more information? Call us now on +61 8 6223 0444

Fabrication Services Overview	92-97
Equipment Hire	98-101
Polyweld Tech Academy	102-103

Fabrication Services

Polyethylene & Polypropylene Fabrication Services

Delivered on-time, to specification, with the documentation complete.

If you're tired of long lead times and poor quality, or need a PE fabrication job completed urgently because your client has amended their plans at the last minute, then our Dynapipe department can help.

With a fully equipped fabrication workshop and experienced and qualified operators, Dynapipe Piping Systems fabricates pipe spools and components from pipe and sheet to suit client requirements.

92

Call us now on +61 8 6223 0444

Shorter Lead Times

We understand that you are often working to tight deadlines and need your poly fabrications fast!

That's why we have a 6,000 m² HDPE fabrication facility with a fully equipped workshop to ensure your fabrication is completed on time. We also have the capacity to put on extra shifts for those really urgent jobs.

And because the Dynapipe division is located within the Dynapipe factory complex, raw materials are directly available which helps to reduce lead times. This also allows the Dynapipe team access to the extensive knowledge, experience and resource of the wider Dynapipe team.

Logistics is where we can help you reduce delays too. With in-house expertise and good relationships with quality transport companies, we'll get it to your site fast and cost effectively!

Fabrication Services

PIPEWORK FABRICATIONS:

- Pipe Spool fabrication
- Pipework and valve preassembly service
- Manifolds
- Puddle flanges
- Bore Headworks
- Suction lines
- Pump pipework
- Poly floats and pontoons
- Offsets
- Scour Tees
- Overflows
- Suction strainers
- Full face flanges
- Flanged Pipes and fittings

SHEET FABRICATIONS:

- Customised Fabrications from sheet (cut/ roll/ bend/ weld/ machine):
- Fabricated plastic tanks and hoppers
- Inspection pits
- Sumps
- Chutes and Chute Lining
- Wear Lining Systems
- Pylon and pile sleeving
- Bunds and spill containment
- Machining and CNC routing of HDPE PVC and PP

Fabrication Services

Design Support

Do you need a complex pipe spool or tank fabricated? Limited space to work with? Struggling with a metal corrosion problem?

The fabrication possibilities in HDPE are limited only by your imagination! The fully qualified Dynapipe team has decades of combined experience, so fabrication complexity is a challenge we enjoy. We can fabricate almost anything from poly pipe and sheet.

We work in partnership with our clients to provide bespoke, pre-fabricated solutions

Call us now on +61 8 6223 0444

Quality Assurance & Documentation:

We understand that Quality Assurance and MDR (Manufacturer Data Records) are key requirements of major projects. With the combination of:

- Quality Management Systems to ISO 9001,
- Fully qualified and experienced staff,
- Calibrated fusion welding equipment,
- Access to the Polyweld Tech NATA Accredited Weld and Materials Testing Laboratory located next door.

Dynapipe has the capability to produce high quality fabrications in accordance with your specifications, and will ensure that all QA/QC documentation requirements are fully completed as required.

Looking to purchase or hire high-density polyethylene welding machines? Want to expand your market and increase your company's capabilities and turnover? Consider Dynapipe as your HDPE fusion equipment partner!

Dynapipe offers a wide range of butt, extrusion, and electrofusion welding machines and accessories to suit your needs:

Dynapipe E.F. WELDERS

Dynapipe's new generation EF300 & EF300GPS electrofusion welding machines are robust, boasting an array of unique and revolutionary features, including GPS data logging.

Key benefits include:

- Welding range of diameters up to 1,200 mm.
- Automatic data logging of 10,000 welding reports.
- Data can be managed on your phone – via Bluetooth & the 'WeldTrace' app.
- Easy to use – will sit on its back for better access.
- Optional recording of GPS location of each weld (EF300GPS units only).
- The strong handle also doubles as a cord holder.
- Comes with an aluminium carry case.
- Fitting information can be entered by barcode, fusomatic pin or manual entry.
- USB connection and Bluetooth connectivity to easily download report data.
- Multilingual, easy-to-understand interface, with simple colour-coded control buttons.

For EF drainage fittings (non-pressure fittings), we have the EFD160 welder. Easy to use, weighing just 1.7 Kg.

GENERATORS

Dynapipe supplies a wide range of generators for powering fusion welding equipment. From light duty petrol units for Electrofusion welding to diesel powered Mine-Spec generators, we have the solution for you.

EXTRUSION WELDERS

Dynapipe supplies and services a range of quality extrusion welders to suit all applications. Key features include:

- Output rates from 2.2 Kg to 3.4 Kg per hour.
- Temperature control safety system cold start control.
- Motor protection with optical display.
- Double-sided wire feed.
- Rotating handle, with an additional side handle.
- 360°-adjustable welding shoe with integrated air guide.
- The extrusion welder comes in a kit with: Instruction manual, transport case, T-handle, hex wrench, HDPE welding wire 4 mm, carbon brush for drive motor, K8/10 welding shoe kit, heating element, and brass brush.

Dynapipe also supplies HDPE welding wire & HDPE sheet.

BUTT FUSION WELDERS

- Electro-hydraulic butt fusion welders in various configurations from 63 mm up to 630 mm.
- Fully self-contained, semi-automated, all-terrain Butt fusion welders.
- Able to weld pipe between \varnothing 125-355 mm and \varnothing 225-630 mm.
- These machines are also capable of High Pressure Welding according to ISO 21307:2011.
- Automated CNC butt fusion welders can be supplied upon request, up to 2,000 mm..

CALIBRATION & SERVICING

To complete the package, Dynapipe's qualified technicians provide maintenance, repair and calibration services for butt and electrofusion equipment from our fully equipped workshop in Maddington, W.A.

DISPOSABLE WELDING WIPES

- Prevent contamination of the weld zone by using these safe & convenient disposable wiping cloths.
- 90% Isopropyl alcohol impregnated.
- Comes in a tub containing 75 wipes.
- Product code: 9991.0075.

WELDING CLAMPS

- We supply a large range of different styles of welding clamps for electrofusion welding.
- Alignment clamps are essential, even for smaller size pipe, to keep the pipe aligned and prevent excessive drag, during the poly welding process and cooling time.
- Clamps are available from 20 mm to 63 mm capacity, and larger welding clamps that can hold up to 710 mm poly pipe.

HAND SCRAPER

- For hand scraping of any pipe & spigot fittings, before EF welding.
- Ergonomic rubber handle.
- 4 sided replaceable blade.

PIPE CUTTERS, SQUEEZE-OFF TOOLS & RE-ROUNDING CLAMPS

- We offer a range of pipe installation equipment,
- Squeeze-off tools in both manual & hydraulic configurations from 20 mm up to 355 mm.
- Re-Rounding clamps 20 mm to 710 mm.
- Pipe cutters 32 mm up to 315 mm.

Scraping is a critical step in the electrofusion process, as inadequate removal of the oxidised surface prevents the pipe and fitting from fusing together, leading to joint leaks.

Hand scraping requires great care and is difficult (particularly with limited space), time consuming and physically demanding especially on larger diameter pipes. It is also hard to achieve consistent peel strip removal of the surface.

Dynapipe offers a state-of-the-art range of rotary pipe scrapers which provide the following benefits:

- Save time – fast and efficient.
- Consistent quality – remove a continuous ‘ribbon’ strip to 0.2-0.3 mm depth.
- Safe – no sharp edges like hand scrapers.
- Spring loaded scraping tip follows variation in pipe wall thickness and ovality.
- Versatile design means a large operating range for pipe diameter and wall thickness.
- Comes with a convenient storage case.

PREPMASTER MULTI ROTARY SPRING-LOADED ROTARY SCRAPERS

- PrepMaster Multi scrapers incorporate a hardened, replaceable blade and give a controlled depth of cut.
- Scrapers available in the following sizes: 63-315 mm, 90-400 mm, 110-500 mm, and 250-710 mm.
- 4 sided cutting blade which can be rotated to extend cutting life. Replacement blades are available.
- A rotary HDPE scraper gives you confidence that all of the 0.2 mm contaminated layer of poly has been removed, so the pipe can be electrofusion welded without the risk of failure.
- Versatile design gives the scraper a large operating range for pipe diameter and wall thickness.

PREPMASTER MONO PIPE SCRAPER

- Mini scraper specifically designed to scrape small pipe sizes that cannot be performed by rotary scrapers.
- One tool per pipe/pipe-wall size, from 20 mm to 63 mm outside diameter, comes in protective box.

TURBO PIPE SCRAPER

- Turbo Pipe Scrapers or PE Pipe Peelers are available to suit 20 mm to 63 mm HDPE pipe, with a different tool required for each size.
- Fast action saves time and reduces mistakes.
- Very easy to use- Simply fits on the end of a power drill or battery drill, and scrapes the pipe evenly and smoothly as the insert unwinds.

For detailed specifications, model numbers and prices contact our friendly sales team on +61 8 6223 0444

OUR VISION

To be recognised as the leading provider of HDPE joint and material testing services, and plastics welder training.

www.polyweldtech.com.au

Polyweld Tech (PWT) is both a NATA endorsed laboratory and Registered Training Organisation specialising in the following areas:

Training:

PWT is accredited to deliver the following Nationally Recognized plastics welder training programs within the PMB07 and UEG11 Training Packages:

- Butt Weld Polyethylene Plastic Pipelines (PMBWELD301)
- Electrofusion Weld Polyethylene Pipelines (PMBWELD302)
- Weld Plastics using Extrusion Techniques (PMBWELD309)

Our highly experienced trainers will happily travel nationwide or overseas to a location convenient for you. The combination of training and testing gives us helpful insight into the areas of welding that may require attention.

Testing:

PWT's NATA endorsed laboratory provides destructive joint testing and material. With the latest technology and experienced technicians we guarantee accurate results.

Testing services include:

- Tensile Testing of butt welded joints to ISO 13953 - Polyethylene (PE) pipes and fittings - Determination of the tensile strength and failure mode
- Bend Testing of butt welded joints to BS EN 12814.1 - 2000 - Testing of welded joints - Bend test
- Electrofusion joint Peel Decohesion testing to ISO 13954 - Peel decohesion test for electrofusion assemblies
- Electrofusion joint Crush Decohesion testing to ISO 13955 - Plastics pipes and fittings - Crushing decohesion test for polyethylene (PE) electrofusion assemblies
- Shear and Peel Strength tests on geomembrane HDPE liners to ASTM D6392 - Determining the Integrity of Nonreinforced Geomembrane Seams Produced Using Thermo-Fusion
- Oxidation Induction Time (OIT) to 11357-6 Part 6: Determination of oxidation induction time
- Melt Flow Rate Testing to ISO 1133 Plastics—Determination of the melt mass-flow rate (MFR) and the melt volume-flow rate (MVR) of thermoplastics
- Differential Scanning Calorimetric Analysis
- Moisture and Volatile Content Analysis

USEFUL INFORMATION

Dynapipe offers custom and specialized fittings including fully pressure rated tees, junctions and flanges machined from solid and hollow bar. Our versatile and innovative fabrication department is able to design the most cost effective and sustainable solutions for the project at hand. Should you require further information, do not hesitate to contact our technical sales team on +61 8 6223 0444.

200	5.0	1000	25.0
225	5.6	1200	30.0

PE100 pipes may be bent or curved on site. The minimum bend radius for SDR11 and SDR17 pipes is 25 times the pipe OD, increasing to 35 times the pipe OD in very cold weather. For thin-walled SDR26 and SDR33 pipes, these values should be increased by 50%. Thicker walled pipes require special consideration, please contact us for more information.

Electrofusion or mechanical joints and fittings should not normally be incorporated in sections of pipework which are to be bent. Instead a formed bend or elbow should be welded into the pipeline in order to prevent excessive stress. The use of pegs or stakes in the trench to define the radius of the designed curve, or to restrain the pipe during installation, is not permitted. Bending tends to be localized at the pegs or stakes and, if they are left in the trench when it is filled, highly localized stresses may cause premature failure of the pipeline.
